

Water stop!

Anhamm spillbarrier

Spillbarrier for sealing off underground garages and accesses

The sealing off of buildings threatened by large amounts of water (e.g. cellars, underground garages, company buildings) due to flooding, thaw or rainfall is guaranteed by the patented anhamm spillbarrier used as a flood barrier.

Characteristics

- Automatic closing without external sources of energy
- Low space requirements
- Alignment of the design to local conditions
- Free traffic routes since accessible with car, forklift truck, lorry etc.
- Minimal installation effort
- Processing of high-end materials (stainless steel)
- Low maintenance costs
- Sealing within the system – no outside surfaces, water tightness guaranteed by this
- Always ready for use since installed in a stationary manner – also functions in absentia
- Approved by FM Approval according to Standard 2510

Anhamm spillbarrier for sealing off underground garages and accesses

Using the anhamm spillbarrier at the entrance to an underground garage. Severe rainfall, thaw and flooding – the penetration of large amounts of water into underground garages, cellars, as well as deep building parts often has catastrophic consequences. The losses quickly add up, since high asset values can be eliminated in the shortest time, e.g. if a number of cars are housed in an underground garage. Through the installation of a patented anhamm spillbarrier as flood barrier and/or flood protection garage entrances and cellar entrances can be optimally protected from a technical, optical and above all commercial point of view.

Activating the barrier without external energy

- Automatic activation of the flap through inflowing fluid
- External sources of energy are not needed, no electronics, pneumatics and no hydraulics
- Alignment of the spillbarrier to the individual architectonic needs possible
- Floor level safe use for problem free driving over with forklift truck, lorry, car etc.
- Processing of high-end materials which with stand the loads in the event of damage.
- Low maintenance costs – no operating costs
